

A World Leading Medium to Long Range Surveillance Platform

The Osiris Ranger is a highly modular ready to go Single Mast Surveillance solution, ideal for medium to long range surveillance applications using HD zoom video cameras and uncooled thermal zoom cameras.

The Osiris Pan and Tilt (PT) unit uses belt or harmonic drives which allow the cameras to rotate 360° continuously. When mounted on the Osiris PT platform, the cameras are able to scan the targets with pin point accuracy.

A range of thermal zoom cameras and the 15-500mm HD video camera are available, all supplied in cable managed housings for protection in the harshest environments. With harmonic drive gears as standard the Osiris has virtually zero backlash ensuring the capture of stable images even at very long distances over land or water.

All Silent Sentinel Pan and Tilt systems are designed with absolute positing feedback as standard. So when twinned with radar or any automated control program it can be driven automatically to any threat detected and remain on target as the threat moves. As with all Silent Sentinel products the Osiris can easily be deployed as a standalone system or a combined solution to increase the performance.

The Osiris platform can be configured and optimised for a broad range of applications and operational theatres with the ability to detect, identify, track and react to the surveillance requirement.
